STÛV₆

A convergence of design and technology

Stûv 6-46x55 with thin extended frame

Stûv, the essential fire

Stûv products are designed and manufactured to bring warmth and wellbeing into your home. Stûv design strives to combine looks and practicality into pure lines and robust technology. Applying design to improve what fire offers by nature, to bring boosted performance and enhanced experience. It's about innovating until we find harmony with the environment. An efficient and natural heating solution as essential part of your home.

At the heart of your home, Stûv creates the hearth.

Stûv 6 – single-sided compact inserts

Remarkable thanks to its wide view of the fire and a compact frame, the Stûv 6 wood-burning insert can easily be installed in most chimneys. To replace an older less effienct fire, or to give your hearth new life, the Stûv 6 will give you a more efficient and environmentally friendly solution. Attractive, ecological and economical, this insert, named "6" after the shape of its combustion profile, will give your home a distinctive, personal look.

Formats

Stûv 6 – 66 x 50

Stûv 6 – 46 x 55

Stûv 6 – 76 x 55

The Stûv 6 is available in three sizes:

- + Stûv 6 46–55: Width 46cm x height 55cm output between 4 and 7 kW
- + Stûv 6 66–50: Width 66cm x height 50cm output between 5 and 9 kW
- + Stûv 6 76-55: Width 76cm x height 55cm output between 6 and 10 kW

- + Expanded view of the fire with reduced installation dimensions
- + Hinged door with integrated handle
- + Ease of installation into most chimneys
- + Optional external combustion air connection
- + Optional fan
- + Three sizes
- + Versatile sizes to suit most chimneys

Decorative frame options

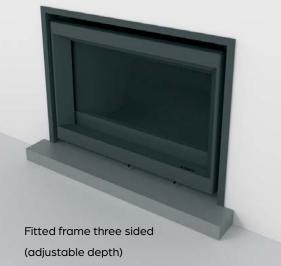

Extended thin frame (allows you to reduce the depth of the housing)

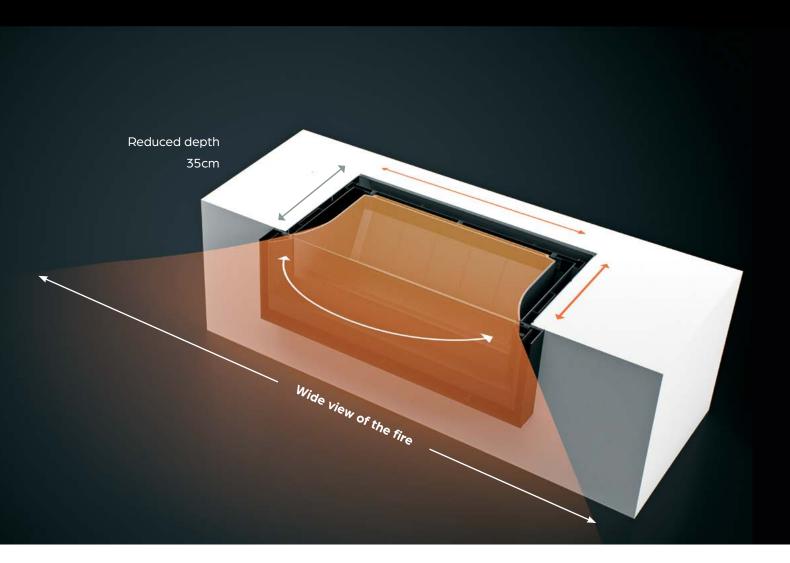

Fitted frame three sided (adjustable depth)

Form and function

The curves of the door frame and combustion chamber reduces the built-in dimensions of the appliance while providing a wider view of the fire. The combustion chamber is made of cast iron. This material provides high heat resistance while maximizing performance. Resistant to the test of time, cast iron can shape sophisticated volumes in the service of technology.

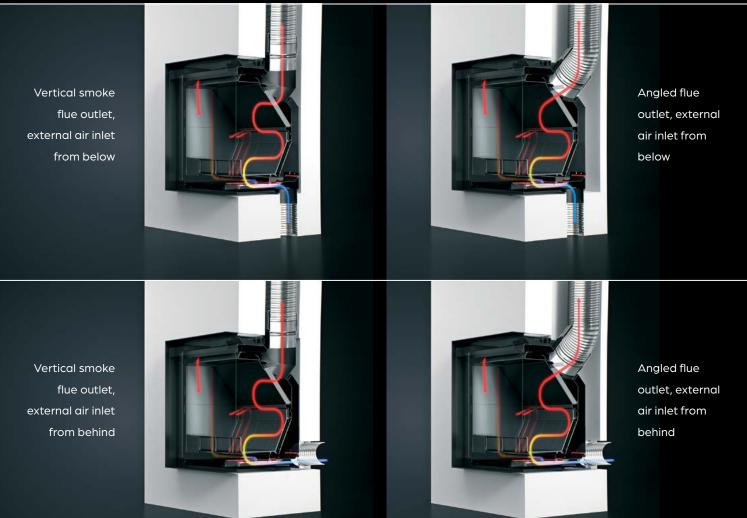

The door opening mechanism is underneath the device in a cold zone. You don't need a glove to open the door when reloading the fire.

Installation

Thanks to its outer casing, the Stûv 6 is really easy to install. This casing means you can easily connect the stove to the flue and air inlet. Once the connections have been fixed, the stove slides in and sealed in the support casing.

Vertical or 45 deg smoke outlet to be connected to an offset flue. Connection to the external air inlet underneath or behind the device (optional)

Convection

The optional fan accelerates the convection flow. Housed in the back of the fireplace, it does not disturb the aesthetics of the front. It can be installed and maintained from the inside of the device (Stûv models 6-66x50 and 76x55).

Combustion

Stûv's patented technology guarantees efficient combustion. By changing the amount of air that comes in, the heating power can be adjusted within a wide range. The technical elements disappear so all you can see is the flames.

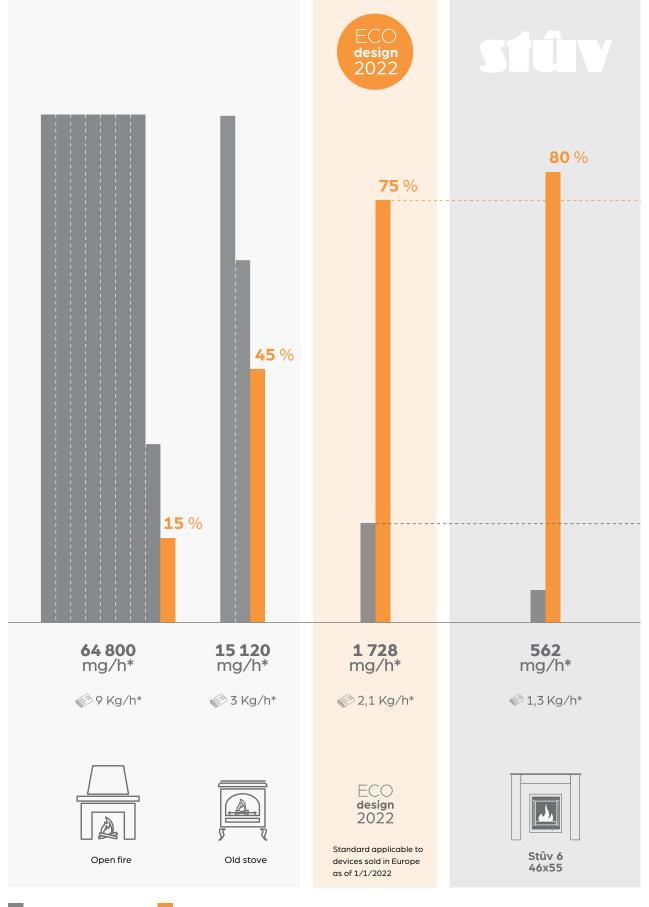

Stûv 6 - Performance that's ahead of its time

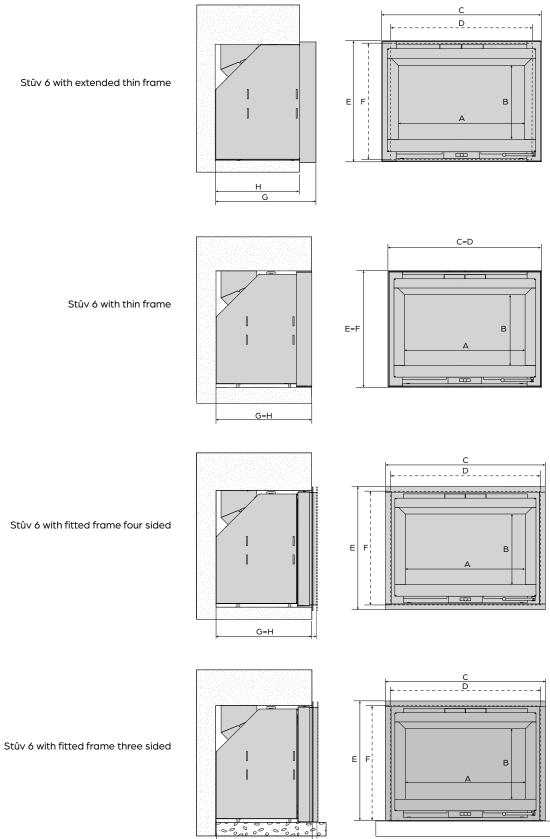

- Combustion air. The air required for combustion can either be taken from the room via the front of the stove, or via an external air inlet underneath or behind the stove (optional).
- 2 Combustion. The air inlet, the combustion chamber and the smoke duct form an air-tight system that does not disrupt the building's insulation and ventilation.
- 3 The air flow along the glass keeps it cleaner whilst boosting performance.
- The secondary air burns the residual gases via post-combustion and guarantees efficient, complete combustion (gas and particles).
- 5 The products of combustionare removed via the chimney flue.

With its high efficiency and its extremely low emissions of fine particles, the Stûv 6 is more efficient than what the Ecodesign standard will impose in 2022. Replacing your old generation insert with a Stûv 6 is consuming 2 times less wood and divide by 25 the amount of pollutants emitted. And compared to using an open fire, the Stûv 6 consumes 7 times less wood and emits 125 times less fine particles. With an increased pleasure of use ...

Stûv 6 with extended thin frame

Constantly striving for improvement...

Stûv invests heavily in research and development both in its own laboratory and thanks to partnerships with experts in the field of combustion. Every detail is important to optimise how a fire works. Stuv products meet the highest standards when it comes to respecting the environment.

All fires comply with: EN 13229 CE, BimSchV1 & 2 (DE), Opair (CH), DINplus (N–EU), BE Phase 1, 2 & 3, EcoDesign (EU).

The Stûv guarantee

- + Stûv fires are renowned for their design and their performance. They are solid, reliable, long-lasting fires.
- + The fires and their components are manufactured in Belgium, in the heart of Europe, with the greatest care. A well-maintained Stûv fire will last a lifetime.
- + Stûv offers users of its products an extended warranty: a total of 5 years for the body of the fire, 3 years for the electrical components and 3 years for the other components (see terms and conditions at stuv.com).
- + Fill in the online form at stuv.com to benefit from this extended warranty.
